Product Description

Apple Mobile Phone Data Cable USB 2.0 Cable Type-C To Lightning For IPhone Charging

A common feature of the Type-C interface and the Lightning interface is that they have no front and back sides, which means that users do not need to worry about the direction of the plug when using it, which provides convenience.

Connector type:

Type-C: One end is the Type-C interface, which is the most popular USB interface type at present. It has the advantages of small size and reversible plug-in design.
Lightning: The other end is Apple's proprietary Lightning interface, which is used in devices such as iPhone, iPad and iPod. The Lightning interface is Apple's unique data cable interface and is only applicable to Apple products. In contrast, the Type-C interface has a wider range of applications and can be used by all digital products that support Type-C. This reflects the exclusivity of the Lightning interface.
